

Emergency Medical Treatment Option

# ASPEN LUMBAR SUPPORT

Changing the Standard of Care  
for Non-Fracture Induced Back Pain:

- Low cost, drug-free treatment option
- Ideal for acute episodes of muscle related back pain
- Low profile design encourages compliance
- Inelastic braces are proven more effective than elastic braces<sup>1</sup>

## Targeted Compression

Aspen's patented 4:1 tightening mechanism allows the patient to independently adjust the top and bottom of the brace to provide localized compression to support fatigued muscles that spasm.
