Aspen OTS™
Lower Spine Braces

The Aspen OTS line of inelastic braces offers a non-narcotic, non-invasive treatment option for patients experiencing muscle fatigue and spasms, which can cause pain. These low profile, one size adjustable braces combine trunk stability and targeted compression where needed to support tight muscles, enabling patients to regain activities of daily living.

One Size Adjustable
Comfortably fits waists ranging from 28 to 54 inches and up to 64 inches with the extension panel. Simple pull-through sizing mechanism offers multiple sizes in one brace, enabling each brace to comfortably fit various patient shapes and sizes. One size adjustable means the correct size is always on hand, minimizing inventory requirements and significantly reducing costs.

Aspen Pain Therapy Braces Proven Effective in Promoting Trunk Stability

Research shows that inelastic braces are significantly more effective at improving trunk stability than elastic braces,\textsuperscript{1,2,3} a key factor in relieving muscle spasms which can cause pain. Increased trunk stability reduces the load on overtaxed muscles,\textsuperscript{4} so tightened and fatigued muscles can relax. Aspen lower spine braces are inelastic by design, backed by years of innovative research and development.

One Size Adjustable
Pull-through sizing mechanism allows for quick and easy adjustment, without the use of tools.

Low Profile Design
Designed for extended wear and can easily be worn under clothing.

Targeted Compression System
Aspen’s patented 4:1 tightening mechanism provides targeted compression where needed to support tight muscles.

Custom Support
When tightening, the firm but flexible back panel naturally conforms to the patient’s lordosis to provide added structural support.
