The revolutionary Aspen Peak Scoliosis Bracing System is an unloader brace designed to improve posture which can enhance the quality of life for adult scoliosis patients. This patented, highly adjustable brace helps promote a natural center of gravity and enhanced mobility. Improving torso alignment can lead to increased vital capacity and ultimately lead to an increase in a patient’s ability to perform activities of daily living. Available in either a one-size adjustable or sized version.

**Designed for Unique Patient Needs**

Multiple configuration options give providers the ability to customize a patient’s treatment. With this modular design, providers are able to assemble the right brace for each patient and ensure optimal performance.

Aspen’s Active Influence line of braces are specifically designed to help patients suffering from chronic postural conditions. These innovative braces provide postural support with the goal of reducing symptoms caused by an unbalanced body position. Aspen Active Influence braces also work to encourage symmetrical spinal loading, prompting a more natural center of gravity and a restoration of normal proprioception.

This unique bracing system acts as an unloader brace for the spine. This active influence system applies forces that work together to promote better alignment, reinstating a more natural center of gravity and helping improve posture.

Localized Compression System
Aspen’s SlickTrack™ Tightening System features an independent upper and lower tightening mechanism, providing localized compression where needed.

Enhanced Pulley System
Reduces friction making it easy to control the level of compression regardless of patient’s strength.

Convenient Closure Handles
Enhances ease of use when applying or removing the brace.

Reliable Structural Integrity
Aspen’s unique segmented structural system integrates vertical stays that provide stability and can be removed on smaller sizes for a low profile, comfortable fit.

Adjustable Tension Straps
To optimize the angle from which tension is applied, the posterior tension strap can be placed anywhere along the attachment strips based on patient needs.

Universal Strut Assembly
Can be adjusted or modified to accommodate patient’s unique needs, then placed anywhere on the belt to optimize support.

FITS WAIST CIRCUMFERENCE RANGING FROM 24-45 IN (61-114 CM) AND UP TO 55 IN (139 CM) WITH ASPEN EXTENSION PANEL

INCLUDES:
Peak Scoliosis Belt
Universal Strut Assembly
Lateral Panel with Iliac Pad
Chest Strap & Chest Pad
Carry Bag
Inservice DVD
Instructions for Use
