Aspen Acute Restriction braces provide significant motion restriction by acting as a kinematic restrictor for patients needing additional support for healing, and can be safely and quickly applied. Gross motion restriction is often desired in treating injured patients recovering from trauma or surgery. The goal is to support healing, limit recovery time and save money by expediting patient discharge times, accelerating turnaround times and minimizing health risks.

**The Aspen Advantage Symbol**
An Innovative Feature Available only from Aspen

**Custom Support**
When tightening, the firm but flexible back panel naturally conforms to the patient’s lordosis to provide added structural support.

**Integrated Anterior Panels**
Anterior panels at each end of the brace overlap to provide added midline support. Featuring Aspen’s innovative FlexTabs™, these panels disperse pressure and naturally conform to each patient’s anatomy for increased comfort.

**Advanced Inelastic Compression**
Aspen’s Super SlickTrack™ System features an independent upper and lower tightening mechanism, providing direct compression where needed to support tight muscles, regardless of patient’s strength.

**Sure Slot™ System**
Unique sizing mechanism allows for quick and easy adjustment, without the use of tools.

**Height Adjusts for Every Body**
Telescoping shoulder straps on the Summit 456 TLSO provide 13 inches of height adjustment to fit varying patient anatomies. In addition, circumferential adjustability enables a customized fit for every body.

**Easy Access for Modification**
All structural components are easily removed and can be heat molded, bent or trimmed to accommodate individual patient conditions.

**Reliable Structural Integrity**
Tri-band technology system and integrated vertical stays provide stability and structural integrity for a contoured fit.
